FAQs 1

1 **Will an operator incur further costs after purchasing the infrastructure?**
Tankr then takes a 10% share of the rental income (including fees for cards, TWINT, Apple and Google Pay). The participation is automatically deducted from each payment. Operators who generate less than CHF 6,500 per year and per location pay an annual license fee of CHF 75 per locking mechanism.

2 **How self-sufficient is the system really?**
Completely self-sufficient in terms of power supply. Each locking element contains an industrial battery. The service life is two years or 20,000 operations. Changing the battery costs the operator a maximum of CHF 3 per locking mechanism. Important: There must be mobile phone reception (4G) on site, as the user's smartphone serves as the end device

3 **Are the Tankr products weatherproof?**
Yes, all our products can be used around the clock, whatever the weather. Additional protection from wind and rain is not necessary. The module and container solutions also protect the sports equipment perfectly from all weather conditions (sun, rain, snow, etc.). This greatly extends the service life of the rental equipment.

4 **How quickly can I realize a staff-free rental station with Tankr?**
Very quickly. As soon as we know which modules or locking columns we are supplying, the system is entered into our system and activated. As soon as the ready-to-use infrastructure has arrived at its destination, the staff-free rental can begin. Depending on the product, we estimate 3-6 weeks from ordering to commissioning.

5 **Is there a minimum order and can a station be added to or enlarged at a later date?**
There is no minimum order for the infrastructure products shown here. We recommend a station size of at least six rental items or six locking units. A module or locking column can be reordered at any time and integrated into the existing system - modular and flexible.

FAQs 2

6 **Is the Tankr app free of charge?**
Yes, the app can be downloaded from the Apple Store and Google Play. Download and registration are free of charge. The app is a booking and reservation tool and at the same time an interface for paying for rental equipment or course offers. Users and operators have bookings and reservations under control at all times.

7 **What information does a customer need to provide to register in the Tankr app?**
Tankr's onboarding guides the user through the registration process. Tankr requires the email address, a mobile number and the full home address. The mobile number is verified by SMS - security is a top priority for us.

8 **Who is responsible for the rental equipment and how often does this have to be checked?**
Tankr is the professional for your staff-free rental. We supply the infrastructure and the software - in other words, the system. The rental professional on site takes care of the procurement and regular maintenance of equipment. The operator makes a commitment to Tankr to provide the best service to its customers - top equipment in the best condition at all times.

9 **How does the self-check function at the self-service stations?**
Experience confirms that the self-check works very reliably. It is the user's duty to check the equipment during the pick-up process and report any damage directly in the app. If the equipment is defective, the rental acceptance can be rejected. When returning the equipment, the app guides the user through the return process.

10 **Are the rental stations monitored?**
No. Where this is desired, we recommend self-sufficient 4G surveillance cameras (Tankr works with Reolink products) and inform the user that the station is being monitored. Such systems reliably store all movements in a cloud. An event can be precisely determined and assigned at a later point in time.
